Building success with the business telephone leader

In today's ultra competitive environment, missing a call can be a disaster. Playing "telephone tag" can be aggravating and counter productive. And sitting at your desk waiting for that all important call? — well, that just doesn't work!

What if your desk phone followed you around the office all day? Introducing the Model CM-16 from Aastra Telecom. With no need for expensive additional switches, boxes or network gear, the Model CM-16 simply allows you to make and receive calls anywhere in your office. And, it gives you features of your M1 desk phone in the palm of your hand.

Featuring a backlit display screen, the Model CM-16 offers a user friendly menu and intuitive operation for ease of use. The screen displays incoming Caller ID information, set status, features activated and menu selections which are activated using two softkeys. With a host of user options, including silent alert, call timer and key lock, the Model CM-16 can be customized to your preferences. The handset

also is equipped with a headset jack to provide even more flexibility.

An additional feature of the Model CM-16 is the 50 name and number Directory. By adding the names and numbers of those you frequently call, the handset gives you the added flexibility of easily making calls away from your desk without having to look up numbers. A 10 number redial function also makes it easier to place calls quickly and accurately.

The Model CM-16 employs 2.4 GHz technology and a wall mountable base station (included) to transmit a clear signal to the handset in a business environment. Also included with the unit is a desk charging cradle that recharges the handset when required.

The CM-16 from Aastra Telecom — a smart solution for today's complex business environment.
